Profile

Backend Engineer (B.Sc. Mechatronics) | 2+ Years Experience in Python backend using FastAPI. Strong experience in system architecture, experience in querying PostgreSQL databases, experience in scalable cloud infrastructure (AWS Lambda/Docker).

Experience

Backend Engineer | AI Application · Paul's Job Technologies GmbH | Sep 2023 – Sep 2025

Berlin, Germany

- Architected and shipped 5+ async REST APIs in FastAPI and Python, containerized with Docker and deployed on AWS Lambda, integrated into a high-traffic multi-tenant backend serving concurrent users across isolated tenants.
- Experience with PostgreSQL (2+ years) for production data storage and querying; Designed Redis caching to cut down on the repeated LLM inference cost and improve response latency.
- Wrote and maintained unit tests, fixtures, and mock tests using pytest within a CI/CD pipeline, ensuring consistent deployment quality across production releases.
- Worked on the creation and implementation of autonomous AI workflows in a production chatbot system; integrated LangChain and OpenAI APIs to enable over 2,400 automated processes in Q1 2025.
- Engineered multi-step prompt strategies and agent tool-use workflows, delivering a 12% uplift in successful job applications within one week of deployment.
- Co-developed an end-to-end topic modeling pipeline for live chat data - combining LLM inference with unsupervised clustering of embeddings to provide real-time insights into the pulse of conversations.

Working Student & Bachelor's Candidate · Paul's Job GmbH (hyrd GmbH) | Jan 2023 – Sep 2023

Berlin, Germany

- Promoted to Full Software Engineer position after thesis work was directly incorporated into company research and production systems.
- Fine-tuned and benchmarked 5 multilingual transformer models (BERT, XLM-R, JobBERT) for experience-level classification, reaching F1-scores up to 0.87.
- Developed an ensemble Voting Classifier model that surpassed the best individual model by 4.6 percentage points.

Education

Mechatronics B.Sc. · Hamburg University of Applied Sciences | Mar 2018 – Sep 2023

Hamburg, Germany

- Thesis: Predicting Professional Experience Requirements from Job Advertisements using Multilingual Transformer-based NLP Models.
- Thesis findings contributed directly to a production classification system at Paul's Job Technologies GmbH.

Skills

Programming Languages: Python, JavaScript, SQL

Backend: FastAPI (async), PostgreSQL, Redis, REST API design, pytest, CI/CD

AI & LLM: LangChain, OpenAI API, RAG Pipelines, AI Agent Development, Prompt Engineering, Embeddings, LLM Evaluation, Transformer Models (BERT, XLM-R), Model Fine-tuning, Hugging Face

Cloud & DevOps: Docker, AWS Lambda, Git

Human Languages: English (C1), German (C1), Indonesian (Native)
